Nest fold

### The small professional folder without the cost!

The **TF MINI** is a real professional, through the large variety of folds it can perform. No matter, which type of fold you choose, the folds are always accurate and your mail will appear with a professional touch.

The **TF MINI** is at least 15 times faster than folding manually. An economical investment even when folding only 25 documents per day. The separate daily-mail station can fold up to 5 documents together, even when they are stapled.

The **TF MINI** can process a large variety of different paper weights and surfaces without any adjustment. Just load the paper and go. The variable speed ensures an optimised folding process.

The **TF MINI** is a solid and reliable folder that can process larger quantities, if required. It is extremely quiet and is designed to be used in office environments. This is possible due to the folding pockets being located inside the machine.

### Unpack, plug & play: TF MINI is ready to use

This compact, universal and extremely quiet folder enables a large variety of folding applications at an excellent price to performance-ratio.

A resettable counter displays the number of folded documents. A batch counter enables the user to determine an exact number of folded documents. After having folded the last document, the **TF MINI** will stop automatically.

The special design of the telescopic stacker prevents the paper from bunching and ensures a proper stack of the folded documents.

The folder offers flexibility and ease of use.
