

AMS i7500 FOLDER INSERTER

Improves the efficiency, security and presentation of your mailing process

What Does It Do?

Stuffing envelopes by hand often takes up time that could be spent on more productive matters. The AMS i7500 Folder Inserter can collate, fold, insert and seal your mail in one single process.

The AMS i7500 can handle up to 60,000 items per month. The flexible feeders can handle both A5 & A4 sizes and varying paper qualities and up to 10 sheets can be automatically processed in a single fold, stapled or unstapled. Featuring low noise levels, easy operation and flexibility, the AMS 7500i is suited to office and mailroom environments. AMS offer several feeder configurations so you only pay for what you really need and optical character recognition (OCR) is standard.

Easy To Use

The compact machine is so simple to use, with the touch screen control panel and the Load 'n' Go program all you do is load your inserts and envelopes then press the button to start. Up to 3,800 documents can be processed per hour, a task that would normally take over 35 hours to do by hand. Brochures and stapled paper can be enclosed.

The system can be set up for uninterrupted operation, this means when one feeder tray is empty, the machine will continue running from the next feeder. With a total capacity of 975 inserts (325 sheets per standard feeder), the machine makes light work of loading. It will also adjust all settings automatically and can store up to 50 jobs in the memory for future recall. A job usage history can also be exported via USB.

Why Do I Need It?

Whether you send out direct mail campaigns, invoices, statements, letters or brochures the AMS i7500 machine handles them with ease. There are a number of options to make mailing easier such as a high capacity feeder to hold 725 additional sheets, an Optical Mark (OMR) capability, a barcode Reading (BCR) capability and a high capacity vertical stacker to hold up to 500 finished envelopes.

Key Features:

- Includes several feeder options to suit your requirements
- Up to 3,800 envelopes can be filled in just 1 hour and over 40,000 per month
- OMR/BCR capability option to eliminate manual sorting
- 7" high resolution touch-screen control panel
- LAN/Wi-Fi embedded
- Uses standard mailing envelopes - C6, DL and C5
- Saves time and money
- Brochures and stapled paper can be enclosed
- Four fold types according to your requirements
- 50 programmable settings

AMS i7500 SPECIFICATIONS

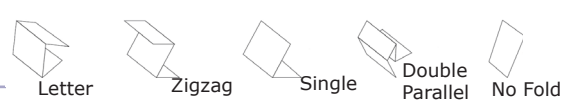

Example Option 2
1 High capacity feeder
1 MaxiFeed tray
1 High capacity vertical stacker

Example Option 3
2 Standard feeders
1 MaxiFeed tray
1 High capacity vertical stacker

Capacity	325 sheets per feeder (80gsm)	325 envelopes	
Fold Types: Max 10 sheets (single fold) 6 (tri fold) Max weight for 1 sheet: 170gsm			

OPTIONS

Standard Feeder

The multi-format standard tray is ideal for glossy paper, booklets and pre-folded inserts.

High Capacity Feeder

This tray holds up to 725 sheets and is perfect for running multi page applications.

MaxiFeed Insert Tray

The MaxiFeed tray holds up to 325 business return envelopes or load up to 1,200 inserts, maximizing your productivity.

High Capacity Envelope Stacker

This reduces incidences of unloading, enabling the user to get on with other tasks. It is possible to unload up to 500 envelopes every eight minutes at maximum speed.

OMR Reading/BCR Reading

The Optical Mark (OMR) capability option eliminates the manual sorting of documents and ensures the right pages go to the right recipients. This works by printing a coded set of marks on your pages. The machine simply reads the marks and inserts the required number of documents into each envelope automatically. The BCR (Barcode Reading) does the same thing but is easier to print, read and track mailing documents. All can be done by using FlexStream software to apply the marks on each page.

The intuitive, full-colour, high resolution 7" touch-screen provides a wizard-based user-friendly interface, making it easy for anyone to select and run their folding and inserting jobs.
